
Health and Safety Progress Updates at Krumbukari

Zero Accident: Successful Completion of Ramu River Bridge.

Ramu River Bridge Construction is the first key point of RNML project. On Oct. 30, This bridge testing is completed. Social cars and truck will begin to pass through, which indicates Bridge construction completion and final success. Bridge is not also for construction service, but for social economic and community development contribution. Its success has been praised by PNG Government and society medias.

So far, this bridge completion has created zero injury, zero construction accident, zero facilities accident. Its success is also safety performance excellence which meets RNML safety objectives. Serial factors as follows accelerate this success.

Active community's Support: Community residents and landowner provided most understanding and support from the beginning. Without their support, it was impossible for Bridge to succeed. This is just one good beginning, which will bring one typical model for another project constructions.

Detailed construction scheme: At the beginning of bridge construction, scheme has been used by Contractor Company- SJ- MCC sub company with the leading of RNML. These schemes identified construction hazards and risk assessment. With progress update, this scheme changed.

Timely inspection and supervision: Routine safety inspection and special safety inspection have covered this whole construction process day to day. Each Tuesday, HSE of Supervision Company and SJ Company with the leading of RNML HSE joined bridge inspection. Any violation of safety, take corrective action as fast. For some special safety issues, RNML HSE followed their corrective action.

Overall Team Safety Management: Safety is overall team's during bridge construction process. Construction supervisor directly faced safety issues, this idea is emphasized during every meeting by General Manager of SJ Company Mr. Du and RNML Company Mr. Deng, and RNML HSE.

Excellent Safety Glass Used

MCC SJ Company as one of RNML project construction contractors has kept striving to improve employee's PPE (personal protective equipment) as core safety culture and major priority at Krumbukari.

Recently, SJ Company has distributed good quality black safety glasses to each employee including national employees and given them training about how to wear and clean it. This kind of glasses from PNG supplier reaches PNG legal compliance; it can protect

their eyes during construction phase from injuries and also prevent ultraviolet from sunlight. Company PPE rules demand each employee during construction period to wear this kind of glasses and keep it clean at suitable place after construction.

New Mess Available

In Krumbukari(KBK) area, new mess has been available inside project camp. Each national employee is enjoying any delicious Chinese and western style meal. RNML at KBK Mining project has created one good example for national employee's meal environment. [Click here](#) to view our news report.

Happy Camp Living

In Krumbukari area, for enriching national employee's living activities, RNML for KBK Mining project has made one entertainment room. These entertainment facilities include table tennis (pingpong) and billiard table. Another basketball location will also be completed. Although national employee is not skilled in playing table tennis and billiard at the beginning, Chinese employees like to teach them. They make fast progress. RNML at KBK will plan to have one entertainment match during rainy season. This activity will be useful to enhance culture communication and friends between national employees and Chinese employees.
